Date of Examination:

DECLARATION

We certify that

- a. The work contained in this project has been done by me under the guidance of my supervisor(s).
- b. The work has not been submitted to any other Institute for any degree or diploma.
- c. We have followed the guidelines provided by the Institute in preparing the project report.
- d. We have conformed to the norms and guidelines given in the Ethical Code of Conduct of the Institute.
- e. Whenever we have used materials (data, theoretical analysis, figures, and text) from other sources, we have given due credit to them by citing them in the text of the report and giving their details in the references. Further, we have taken permission from the copyright owners of the sources, whenever necessary.

Name and Signature of the student

ACKNOWLEDGEMENT

We take this opportunity to express our deep sense of gratitude to our guide, **Prof. Rekha K. Sahare**, for her excellent guidance, constant encouragement, and inspiration throughout the project work. Without her valuable support, this work would not have been a success. She has been one of the best mentors, and we will always remain thankful to her.

We would like to extend our special thanks to our Project Coordinator **Prof. Shailendra W. Shende** who has helped us directly or indirectly to complete this project work.

We would like to thank **Prof. Chandrapal U. Chauhan**, Head of the department of Computer Science and Engineering. He was very helpful and encouraging while doing research work.

We would like to thank **Dr. P. V. Washimkar**, Principal (GCOEC) who has provided all institutional facilities as and when needed.

We would also like to thank all our classmates for their valuable suggestions and helpful discussions and our thanks goes to all the people who have supported us to complete the research work directly or indirectly.

Finally, we are extremely grateful to our parents for their love, prayers, care and sacrifices for educating us and preparing us for our future.

ABSTRACT

Academic institutions often face significant challenges in managing student project submissions, evaluations, and archival processes due to traditional paper-based systems. These methods lead to inefficiencies such as misplacement of reports, limited accessibility to past work, difficulty in project evaluation, and minimal collaboration between current students and alumni.

To address these challenges, this project introduces ThesisIT: Web-Based Thesis Storage Vault, a responsive and scalable web-based platform designed to digitize and streamline the end-to-end lifecycle of academic projects. Aimed primarily at final-year and third-year students, the system enables digital project submission, facilitates online evaluation by faculty, and offers a secure, centralized repository for long-term storage and academic reference.

ThesisIT incorporates role-based access control, categorizing users into students, project guides, and administrators to ensure secure and organized access. Key features include the Project Refinery for refining submissions, an Evaluation Dashboard for faculty to assess and provide feedback, and a searchable Project Hub where students can explore completed projects, resume incomplete work, and connect with alumni for mentorship.

Developed using the MERN stack—HTML, CSS and JavaScript for the frontend, Node.js and Express.js for the backend, and MongoDB for data storage—the platform ensures smooth, responsive, and secure project handling. Though currently not deployed on the cloud, it demonstrates high usability and scalability. Future enhancements include mobile application support, integration of plagiarism detection tools, and real-time collaboration features.

ThesisIT aims to reduce administrative overhead, improve the efficiency of academic workflows, and preserve the integrity and accessibility of academic research.

CHAPTER NO. 1

INTRODUCTION

CHAPTER 1

INTRODUCTION

1.1 Project Background

Managing final-year and third-year academic projects is a core aspect of engineering and science education. However, in many institutions, this process is still largely manual — from physical document submissions to offline evaluations and storing of records. This outdated method creates several challenges such as loss of documents, inconsistent evaluations, lack of accessibility to previous projects, and inefficient faculty workload management.

To overcome these inefficiencies, we developed *ThesisIT* — a comprehensive, responsive web-based platform that digitizes the entire project lifecycle. This platform allows students to submit their projects digitally, faculty to evaluate and manage them in a structured way, and administrators to maintain a centralized project database. It introduces key modules like the *Project Refinery*, allowing students to enhance their work before final submission, and the **Project Hub*, a searchable archive of past projects to inspire and guide current batches. The system promotes better collaboration, transparency, and learning continuity within academic ecosystems.

1.2 Problem Statement

Traditional project management in colleges involves paper-based documentation that is vulnerable to damage, misplacement, and time delays. Faculty members often find it difficult to track student progress or evaluate submissions systematically. Students, especially juniors, lack exposure to past projects and rarely get to learn from their seniors' work. Additionally, alumni are usually disconnected from this process and unable to contribute or mentor.

ThesisIT addresses these core issues by:

- Replacing manual processes with a digital submission and evaluation system.
- Introducing role-based access for students, faculty, and administrators.
- Creating a structured repository of completed projects for academic continuity.
- Enabling feedback and assessment in a transparent, organized format.
- Opening avenues for alumni-student interaction and mentorship.

1.3 Purpose of Study

The primary aim of this project is to build an end-to-end academic project management platform that ensures secure, centralized, and efficient handling of student submissions while also acting as a digital archive and communication bridge between current students and alumni.

1.4 Objectives:

- Create a centralized and user-friendly web platform.
- Implement secure role-based logins for users with customized dashboards.
- Provide tools like Project Refinery to help students polish their submissions.
- Establish a Project Hub that stores and categorizes past projects for future references.
- Facilitate structured evaluations via rubrics and feedback.
- Send real-time notifications for deadlines, approvals, and evaluation.
- Allow juniors to study, review, or even build upon completed projects.
- Enable communication between alumni and current students for project guidance or continuation.

1.5 Technological Base:

ThesisIT is built using modern full-stack web development technologies, ensuring a seamless user experience across devices.

- **Frontend:**

React.js (for building dynamic interfaces), HTML, CSS, JavaScript

- **Backend:**

Node.js with Express.js for API and server logic

- **Database:**

MongoDB for storing user data, project metadata, evaluations, etc.

- **Design & Prototyping:**

Figma for user interface design and wireframes.

- **Development Tools:**

VS Code, Git, GitHub, JSON for data formatting and communication

CHAPTER NO. 2
LITERATURE SURVEY

CHAPTER NO. 2

LITERATURE SURVEY

2.1 Literature Survey:

1. A Web-Based Repository with Web Forum for Undergraduates' Final Year Projects in Higher Educational Institutions[1]

Publication Year: 2011

Author: Awoyelu IO

Summary: Developed a basic web-based project repository which also included a student discussion forum. While it offered project submission features, it lacked critical components such as structured evaluation tools, feedback mechanisms, and collaborative team management, reducing its effectiveness for comprehensive academic project tracking.

2. Development of a Web-Based FinalYear Project Repository System (FYPRS) for Nigerian Tertiary Institutions[2]

Publication Year: 2024

Author: Onwuegbuzie Innocent Uzougbo and Adu Michael Kolade

Summary: created a Laravel-based submission platform that digitized basic project uploads and faculty feedback. However, it failed to provide features like project refinement before final submission or an easily navigable archive of previous works. The absence of learning aids for juniors or alumni collaboration limited its long-term academic value.

3. Thesis Management System with Automated Defence Scheduling[3]

Publication Year: 2021

Author: Sci. Int. (Lahore)

Summary: Focused more on the scheduling of thesis submissions using genetic algorithms. This technical solution optimized submission timelines but overlooked broader needs like structured evaluations, historical project access, and stakeholder communication.

4. WebUPMS: A WebBased Undergraduate Project Management[4]

Publication Year: 2023

Author: XIPT Researchers

Summary: Introduced WebUPMS, which automated grading and submission. Despite good initial design, it lacked refinement tools, access to historical project data, and

was restricted to batch-wise data, limiting junior and faculty access to broader knowledge sharing.

5. Web-Based Student Project Management[5]

Publication Year: 2024

Author: TetFund Researchers

Summary: designed a student project system targeted at Nigerian universities. It introduced digital repositories but did not consider collaborative tools, alumni involvement, or a structured interface for junior learners to explore past projects or resume incomplete ones.

CHAPTER NO. 3
MATERIALS AND
METHODS

CHAPTER NO. 3

MATERIALS AND METHODS

3.1 Methodology:

The development of ThesisIT: Web-Based Thesis Storage Vault followed a systematic software engineering approach to ensure that both technical efficiency and user-friendliness were achieved. The platform was developed over multiple stages, each focusing on a specific phase of the system lifecycle.

1) Information Gathering:

Conducted detailed surveys and interviews with students, faculty, and academic coordinators to identify key pain points in the traditional process.

2) Design Phase:

Wireframes, mockups, and flow diagrams were created using Figma, ensuring all users had intuitive access and clearly defined roles.

3) Development:

Built using HTML, CSS and JavaScript for the frontend and Node.js with Express.js for the backend. MongoDB was chosen for its flexibility and efficiency in managing semi-structured data like project metadata, user profiles, and evaluation records.

4) Testing:

Involved multiple rounds of usability testing, performance monitoring, and validation with real users. Security audits ensured proper authentication for all users.

5) Feedback and Iteration:

Based on initial feedback from faculty and student workshops, the system was iteratively improved for dashboard design, notifications, and project hub navigation.

3.2 Features Implemented:

- Secure role-based access (Student/Faculty/Admin)
- Project Submission Portal with upload history and tracking
- Evaluation Panel with rubric-based grading
- Admin Control Dashboard for managing roles and system data
- Project Refinery for student revision cycles
- Project Hub for exploring archived projects
- Real-time Notification System
- Feedback storage for continuous quality improvement

All features were built without using cloud infrastructure in this phase to keep development localized and easily testable on campus networks.

CHAPTER NO. 4
SYSTEM ARCHITECTURE

CHAPTER NO. 4

SYSTEM ARCHITECTURE

4.1 System Architecture:

The system architecture of ThesisIT: Web-Based Thesis Storage Vault is modular, scalable, and built to ensure separation of concerns across frontend, backend, and database layers.

fig. Block Diagram for ThesisIT: A Web – Based Thesis Storage Vault

4.2 Step-by-Step Workflow:

1. User Authentication & Role-Based Access:

- Login interface differentiates between Students, Faculty, and Admin users.
- Users are authenticated and redirected to respective dashboards based on roles.

2. Student Dashboard:

- Upload project files and descriptions.
- View submission deadlines and feedback.
- Access the Project Refinery for improvement before final submission.

3. Faculty Dashboard:

- View and download student submissions.
- Evaluate using embedded rubrics.
- Add comments or request revisions.
- Approve and archive final submissions.

4. Admin Panel:

- Manage users, roles, project categories, and global notifications.
- Monitor system status and activity logs.
- Review and export project data for institutional use.

5. Project Hub:

- Searchable and filterable archive of completed projects.
- Allows juniors to study project structure and content.
- Promotes project continuation and innovation.

6. Notification System:

- Sends dashboard alerts and email reminders for deadlines, feedback, and status changes.

7. Security Layer:

- Implements encrypted storage, form validation, and role-level permission restrictions.

4.3 Technologies Used:

- **Frontend:** HTML, CSS and JavaScript components for modular UI
- **Backend:** Node.js APIs, Express routing
- **Database:** MongoDB for storing users, projects, evaluations
- **Design & Prototyping:** Figma
- **Development Tools:** Git, GitHub, VS Code

CHAPTER NO. 5

APPLICATIONS

CHAPTER NO. 5

APPLICATIONS

5.1 Applications:

ThesisIT has a wide range of use cases, particularly in academic environments where digital transformation is crucial:

- **Academic Institutions:** Streamlines submission, evaluation, and record-keeping of student projects.
- **Faculty Members:** Enables structured evaluations with reduced workload through digital dashboards and rubrics.
- **Students:** Allows for timely submission, transparent feedback, and access to previous high-quality projects.
- **Junior Students:** Provides access to a repository of completed projects for inspiration, understanding formats, and learning project structure.
- **Project Continuation:** Juniors can pick up incomplete or underdeveloped senior projects, helping with continuity and innovation.
- **Alumni Engagement:** Past students can showcase their projects, assist juniors, and offer mentorship.
- **Research Scholars:** Use the Project Hub as a starting point for new research or as references for academic writing.
- **Departmental Use:** Can be used for accreditation, report generation, and maintaining an academic record of output.

CHAPTER NO. 6

BENEFITS

CHAPTER NO. 6

BENEFITS

6.1 Benefits:

The implementation of ThesisIT offers tangible advantages across stakeholders:

- **Centralized Digital Repository:** No more lost or misplaced documents; all projects are stored securely and accessibly.
- **Transparency & Fair Evaluation:** Faculty members can evaluate consistently using built-in rubrics, and students can see progress.
- **Improved Collaboration:** With project status tracking and faculty feedback, collaboration becomes more meaningful.
- **Real-Time Notifications:** Deadline reminders, feedback alerts, and submission confirmations keep everyone on track.
- **Project Refinery Tool:** Enhances the overall quality of final submissions through guided revisions.. .
- **Project Hub:** Acts as a knowledge bank of projects, enabling juniors to explore and learn from prior work.
- **Alumini Connect:** Promotes interaction between past and current students for mentorship and continuity.
- **Encourages Reusability and Innovation:** Incomplete or innovative ideas from previous years can be continued or enhanced.
- **Reduces Paperwork and Admin Burden:** Moves academic processes into a sustainable digital ecosystem.
- **Scalable for Institutional Needs:** The platform can grow in terms of users, departments, and features.
- **Boosts Academic Record Keeping:** Useful for inspections, audits, and performance reporting.

CHAPTER NO. 8
CONCLUSION & FUTURE
WORK

CHAPTER NO. 8

CONCLUSION AND FUTURE WORK

8.1 Conclusion:

ThesisIT is designed as a comprehensive platform to streamline the final-year and year project management process in academic institutions. The system provides a centralized repository for students to submit their projects, enabling faculty to evaluate submissions and provide feedback. Additionally, it enhances accessibility by allowing juniors to view past projects in a readable format, fostering knowledge sharing and continuous learning. The inclusion of a team management feature enables students to efficiently form groups while maintaining academic guidelines. By eliminating manual inefficiencies, ThesisIT improves project tracking, evaluation transparency, and collaboration among students and faculty. The system's implementation represents a significant step toward modernizing project management in higher education, ensuring a more efficient, structured, and accessible workflow.

8.2 Future Work

1. **Cloud-Based Storage:** Implement secure and scalable cloud storage for easy project access and backup..
2. **E-Learning Module:** Develop an interactive learning section with resources on research methodologies and project writing.
3. **Plagiarism Detection:** Integrate a plagiarism-checking tool to ensure originality in submitted projects.
4. **Real-Time Collaboration:** Enable live chat, discussion forums, and file-sharing for better student-supervisor interaction.

CHAPTER NO. 9

APPENDICES

A Web-Based Academic Project Management and Evaluation System

Prof. Rekha Sahare¹, Assistant Professor, Department of Computer Science and Engineering,
Government College of Engineering Chandrapur, Maharashtra, India

Payal Jadhav², Pranav Gore³, Rutuja Narad⁴, Shruti Morey⁵, Shruti Mishra⁶
Final year, Department of computer science and engineering, Government college of engineering,
Chandrapur, Maharashtra, India.

Abstract - A Web-Based Academic project management and evaluation system referred as ThesisIT is a responsive web-based platform designed to streamline project submission and evaluation for final-year and third-year students. This system enables students to submit their projects digitally, while faculty members can evaluate them online through a role-based authentication system that categorizes users into students, project guides, and administrators. Additionally, ThesisIT introduces features such as Project Refinery and Project Hub for enhanced project organization and accessibility. This paper presents the design, implementation, and evaluation of ThesisIT, highlighting its efficiency, usability, and potential impact on academic project management. The system is expected to improve the workflow of project handling, reduce administrative burden, and ensure secure storage of academic work, preventing loss or tampering of crucial research data.

Keywords: Digital thesis, Role-based authentication, Project repository, Student project management system, Web development, CSS, Node Js, Express Js, ThesisIT

1. INTRODUCTION

ThesisIT is designed to address inefficiencies in project submission and evaluation in academic institutions. Traditional methods involve physical documentation, which is often misplaced or damaged, causing issues for both students and faculty. Moreover, faculty members struggle with tracking multiple projects and ensuring evaluations are done systematically. Students, on the other hand, find it challenging to access past projects for reference and improvement. With the increasing need for digitalization in education, ThesisIT serves as a web-based thesis storage vault that allows students to submit projects electronically while enabling faculty to conduct seamless digital evaluations.

In academic institutions, project submission and evaluation are crucial components of a student's academic journey. However, traditional methods involving paper-based submissions are often inefficient, leading to issues such as misplaced documents, delays in evaluation, and lack of accessibility to past projects for reference. Faculty members also face challenges in tracking multiple submissions, managing evaluations systematically, and ensuring fairness in grading. With the increasing adoption of digital solutions in education, there is a pressing need for a secure, centralized,

and user-friendly system that streamlines project management and enhances collaboration between students and faculty.

ThesisIT is a web-based platform designed to modernize and digitize the process of project submission, evaluation, and storage. It provides a structured, role-based authentication system that categorizes users into students, project guides, and administrators, ensuring secure and efficient handling of academic work. By enabling online submissions, ThesisIT eliminates the risks associated with physical documentation, making the process more convenient and transparent. Faculty members can evaluate projects digitally, providing timely feedback while reducing the administrative burden associated with traditional methods.

One of the key challenges in academic project management is the lack of a structured repository for past projects. Many students struggle to find reference materials, limiting their ability to learn from previous research. ThesisIT addresses this issue through its "Project Hub" feature, which acts as a centralized digital repository where students, faculty, and alumni can access previously submitted projects. This not only fosters knowledge sharing but also helps students improve their work by building upon existing research.

To further enhance the quality of submissions, ThesisIT introduces "Project Refinery," a feature that allows students to refine their projects before final submission. This ensures that projects meet academic standards, leading to better research quality and innovation. Additionally, automated notifications and tracking mechanisms help students stay updated on submission deadlines and evaluation statuses, improving efficiency and reducing last-minute hassles.

Security is another critical aspect of project management in educational institutions. Unauthorized access or data loss can compromise academic integrity. ThesisIT implements robust security measures, including role-based authentication and encryption, ensuring that only authorized users can access, submit, and evaluate projects. Regular backups prevent data loss, providing a reliable and secure storage solution.

By addressing inefficiencies in project submission, evaluation, and storage, ThesisIT aims to revolutionize academic project management. The system not only reduces administrative workload but also enhances accessibility, transparency, and security. With features designed to improve the student and faculty experience, ThesisIT represents a

significant step toward the digital transformation of academic project handling.

1.1 Problem Statement

Managing project submissions and evaluations in academic institutions presents multiple challenges. Traditional paper-based submissions are inefficient, prone to damage, and difficult to track. Faculty members often face difficulties in organizing and evaluating projects systematically, leading to delays and inconsistencies. Additionally, students lack a centralized system to access past projects for reference, limiting their ability to build upon existing research. The absence of a structured repository also results in a disconnect between alumni and current students, reducing knowledge sharing and mentorship opportunities.

ThesisIT aims to address these issues by providing a web-based platform where students can securely submit their projects, faculty can evaluate them using predefined rubrics, and juniors can access past projects in a readable format. The system also integrates features like automated notifications, project tracking, and data security to enhance the efficiency and transparency of the evaluation process.

1.2 Objectives

The primary objectives of ThesisIT are:

- To develop a secure and centralized web-based platform for project submission and evaluation.
- To provide a structured and transparent evaluation process using predefined rubrics.
- To create a **Project Hub** where completed projects are stored for future reference by students, faculty, and alumni.
- To implement **Project Refinery**, allowing students to refine and improve their submissions before final evaluation.
- To ensure role-based authentication for students, faculty, and administrators, enhancing security and user management.
- To facilitate faculty scheduling and notification systems for streamlined evaluations.
- To enable alumni engagement by maintaining project creator information for continued mentorship and industry connections.

By achieving these objectives, ThesisIT will significantly improve academic project management, ensuring efficiency, accessibility, and knowledge continuity in institutions. Managing project submissions and evaluations in academic institutions poses several challenges, including inefficiency, data mismanagement, and lack of standardization. Traditionally, project handling relies on physical documentation, which is prone to loss or damage. Additionally, students often face difficulties in tracking their submission status, while faculty members struggle with organizing and evaluating multiple projects effectively. ThesisIT addresses these challenges by providing a web-based thesis storage vault that enables students to submit projects online while allowing faculty members to conduct digital evaluations seamlessly. By integrating automated workflow management, the system ensures a streamlined process from submission to final evaluation, reducing manual intervention and improving transparency.

2.MEHODOLOGY

ThesisIT follows a structured methodology for development, implementation, and evaluation. The methodology is divided into multiple stages to ensure a comprehensive approach to system design and execution. The study employs a mixed-method approach, including:

- **Surveys and Interviews:** Conducted with students and faculty to understand the challenges in project submission and evaluation.
- **Case Studies:** Examined institutions implementing digital submission platforms to evaluate the effectiveness of web-based project management.
- **Usability Testing:** Performed through real-time simulations where users interact with ThesisIT to assess system efficiency and ease of use.
- **System Performance Analysis:** Evaluated through stress testing and security audits to ensure data integrity and resilience against potential cyber threats.

2.1 System Design and Development

The system architecture of ThesisIT is designed to provide a seamless experience for students, faculty, and administrators. The platform follows a modular architecture consisting of:

- **Frontend:** Developed using modern web technologies to ensure an intuitive user interface.
- **Backend:** A robust database-driven backend that manages project submissions, user roles, and evaluations.
- **Security Measures:** Implementing role-based authentication and encryption to ensure data integrity and privacy.
- **Scalability:** Designed to support future enhancements such as AI-driven analytics and integration with external academic databases.

2.2 Implementation of ThesisIT

The implementation phase focuses on deploying ThesisIT in an academic environment, ensuring smooth adoption by all stakeholders. Key implementation steps include:

- **System Deployment:** Hosting the platform on a secure server with cloud-based backup solutions.
- **User Training:** Conducting workshops for students and faculty to familiarize them with the platform.

- **Testing and Debugging:** Running usability tests, security audits, and performance evaluations to ensure the system runs efficiently.
- **Continuous Monitoring:** Gathering feedback from users to refine and enhance system functionality.

3. SYSTEM DESIGN AND FEATURES

ThesisIT consists of the following key features:

- **Role-Based Authentication:** Users are categorized as students, project guides, or administrators, each with specific access permissions to ensure secure handling of academic work.
- **Project Submission:** Final-year and third-year students can upload their projects securely through an intuitive user interface, ensuring easy access to project records.
- **Online Evaluation:** Faculty members can review, grade, and provide feedback digitally, streamlining the assessment process.
- **Project Refinery:** Allows students to refine and improve project submissions before final evaluation, ensuring higher quality work.
- **Project Hub:** A centralized repository where submitted projects are stored for future reference, allowing students and faculty to access past research works for knowledge enhancement.
- **Automated Notifications:** The system sends alerts to students and faculty regarding submission deadlines, evaluation status, and feedback availability.
- **Data Security and Backup:** Ensures that submitted projects are protected using encryption techniques and regular backups, preventing unauthorized modifications or data loss.

4. LITERATURE REVIEW

Sr. No.	Year and Author	Title	Finding	Limitation	Identified Gap
1.	2011- Awoyelu IO	A Web-Based Repository with Web Forum for Undergraduates' Final Year Projects in Higher Educational Institutions	Developed a repository for storing final-year projects with a web forum for student collaboration.	No structured project evaluation or feedback system.	Lacks project evaluation, refinement, and team management like ThesisIT.
2.	2024- Onwuegbuzie Innocent Uzougbo and Adu Michael Kolade	Development of a Web-Based Final-Year Project Repository System (FYPRS) for Nigerian Tertiary Institutions	Developed a centralized platform for project submission, evaluation, and storage using Laravel.	No project refinement, no structured feedback system, and no team management.	Lacks project refinement, readable past projects, and team management, which ThesisIT includes.
3.	2021- Sci. Int. (Lahore)	Thesis Management System with Automated Defense Scheduling	Introduced an automated system for thesis cycle tracking, including oral defense scheduling using a genetic algorithm.	Focused on scheduling rather than project submission, evaluation, and team collaboration.	ThesisIT does not require automated scheduling but includes project evaluation, feedback, and access to past projects.
4.	2023- XIPT Researchers	WebUPMS: A Web-Based Undergraduate Project Management System	A web-based system for project submission, assessment, and grading with improved efficiency.	No project refinement process or junior access to past projects.	Lacks project refinement, structured feedback system, and team management, which ThesisIT provides.
5.	2024- TetFund Researchers	Web-Based Student Project Management System	Automates project selection, supervision, evaluation, and storage while preventing duplication.	Lacks team management, project refinement, and access to past projects for learning.	ThesisIT enhances project quality through evaluation, refinement, and accessible past projects.

5. RESULT AND DISCUSSION

Preliminary findings indicate that ThesisIT significantly improves project management efficiency, reduces administrative workload, and enhances the digital evaluation process. The system received positive feedback regarding usability and functionality from both students and faculty. Survey results showed that 85% of students found the platform easier to use compared to traditional methods, and 90% of faculty members reported a reduction in workload related to project evaluation. Performance tests confirmed that the system can handle concurrent submissions efficiently without significant delays. The study also identified areas for improvement, such as incorporating AI-based plagiarism detection and advanced reporting tools for deeper project insights.

6. CONCLUSION

ThesisIT is designed as a comprehensive platform to streamline the final-year and third-year project management process in academic institutions. The system provides a centralized repository for students to submit their projects, enabling faculty to evaluate submissions and provide feedback online. Additionally, it enhances accessibility by allowing juniors to view past projects in a readable format, fostering knowledge sharing and continuous learning. The inclusion of a team management feature enables students to efficiently form groups while maintaining academic guidelines. By eliminating manual inefficiencies, ThesisIT improves project tracking, evaluation transparency, and collaboration among students and faculty. The system's implementation represents a significant step toward modernizing project management in

higher education, ensuring a more efficient, structured, and accessible workflow.

7. FUTURE WORK

1. **Cloud-Based Storage** – Implement secure and scalable cloud storage for easy project access and backup.
2. **E-Learning Module** – Develop an interactive learning section with resources on research methodologies and project writing.
3. **Plagiarism Detection** – Integrate a plagiarism-checking tool to ensure originality in submitted projects.
4. **Real-Time Collaboration** – Enable live chat, discussion forums, and file-sharing for better student-supervisor interaction.
5. **Mobile Accessibility** – Develop a mobile-friendly interface or app for convenient access to ThesisIT on different devices.
